PROFESSIONAL SUMMARY

B.Tech IT graduate and aspiring SQL Developer & Data Analysis with hands-on project experience in SQL databases, Python data analysis, data cleaning, and visualization. Skilled in extracting insights from structured datasets using SQL, Python, Excel, and Power BI. Seeking a fresher opportunity to apply analytical and database skills.

TECHNICAL SKILLS

SQL & Programming	SQL, Python
Databases	MySQL, PostgreSQL
Data Analysis	Pandas, NumPy, Excel
Visualization	Power BI, Matplotlib, Seaborn
Tools	**MySQL, PostgreSQL,** Git, GitHub, VS code, Jupyter Notebook
Core Skills	Data Cleaning, Data Visualization

PROJECTS

1. Food Delivery Data Analysis

Analyzed food delivery data to evaluate order trends, customer ratings, delivery performance, and revenue patterns. Used SQL queries to calculate key performance indicators (KPIs), including total orders, customer revenue, and average ratings. Developed an interactive Power BI dashboard to visualize business performance and identify trends for better decision-making.

- Tools: Python, Pandas, SQL, PostgreSQL, Power BI, Excel, Csv file and VS code

2. Customer Segmentation Analysis

Analyzed customer data to identify distinct customer segments based on purchasing behavior and spending patterns. Performed data cleaning, exploratory data analysis (EDA), and customer profiling to uncover meaningful insights. Visualized customer trends and spending patterns to support data-driven marketing and business decisions.

- Tools: Python, Pandas, NumPy, Matplotlib, SQL, PostgreSQL, Excel, CSV file, VS code and Power BI

3. **Netflix Movies & TV Shows Data Analysis - Python** — Performed EDA on Netflix content by type, release year, country, and ratings; learned to communicate findings through charts.

4. Data Quality Automation Project - This project is an automated data quality monitoring system built using **PostgreSQL and Python**. The project identifies common data quality issues such as missing values, duplicate records, and orphan records. Python automatically runs the quality checks, generates Pass/Fail results, counts failed records, and creates CSV reports and a data quality scorecard.

5. **Retail Data Analysis | SQL, Python & Power BI**
   Analyzed retail sales data using SQL and Python to identify sales trends, top-performing products, and monthly revenue.
   Cleaned and analyzed data using Python and created an interactive Power BI dashboard to visualize key business insights.
   Tools: SQL, PostgreSQL, Python (Pandas, Matplotlib), Power BI, CSV,Excel

6. **HR Analysis Dashboard | Power BI**
   - Developed an interactive HR dashboard using Power BI and CSV data to analyze employee metrics and workforce trends.
   - Created visualizations and interactive filters to support data-driven HR insights.

   Tools: Power BI, CSV, Data Visualization

7. **Online Bookstore - SQL** — Analyzed books, customers, and orders using JOIN, GROUP BY, aggregate functions, and sorting; learned relational database analysis.

8. **Library Management - SQL** — Analyzed books, members, and borrowing records using JOIN, HAVING, DATEDIFF(), and CURDATE(); learned database relationships.

9. **Bank Management System - SQL** — Analyzed customers, accounts, and transactions using JOINs, aggregations, filtering, and subqueries; practiced financial data analysis.

10. **Sales Data Analysis - Python** — Used Pandas, NumPy, Matplotlib, and Seaborn to clean and analyze sales by product, category, city, and month; learned EDA and visualization.

11. **Employee Data Analysis - Python** — Explored employee department, salary, experience, age, and city data; learned preprocessing, aggregation, and visualization.

12. **Data Cleaning using Python** — Cleaned a raw CSV using Pandas by handling missing values, correcting data types, and improving consistency; learned data preparation.

13. **Customer Shopping Analysis - Python** — Analyzed shopping behavior using Pandas, NumPy, Matplotlib, and Seaborn; learned to generate insights from customer and sales data.

Experience

Data Analyst Intern

YuvaIntern | Remote / Bhopal ,MP

July - August 2026

- **Data Processing & EDA:** Processed and cleaned large-scale e-commerce logistics datasets using **Python (Pandas, NumPy)**; identified delivery bottlenecks and carrier SLA compliance using **Matplotlib & Seaborn**.
- **Geospatial Route Analysis:** Mapped order distribution and high-delay fulfillment hubs with **GeoPandas/Folium** to analyze route efficiency and last-mile delivery performance.
- **Predictive Analytics & ML:** Built **Scikit-learn** regression models to forecast shipment delays and estimate arrival times (ETA) based on transit metrics.
- **Business Insights:** Derived key logistics KPIs to optimize last-mile workflows, reducing delivery delays and improving fulfillment efficiency.
- • **Tools & Platforms:** VS Code, MS Excel

EDUCATION

University Institute of Technology, Rajiv Gandhi Proudyogiki Vishwavidyalaya (UIT-RGPV), Bhopal
B.Tech – Information Technology
Graduation Year – 2026

CERTIFICATIONS

- SQL with Python basics – MindLuster
- Forage Cyber Security Consulting Job Simulation
- Deloitte Data Analytics Job Simulation - Deloitte
- Introduction to AI – Simplilearn | SkillUp

ADDITIONAL INFORMATION

- Career Interest : Data Analytics, SQL Development, Database Management
- Status: Fresher | Open to internship and entry-level opportunities
